Careers in mining

Careers in Mining

You might think that the only jobs available in the mining industry involve driving big trucks in an open pit or working underground.

However, that is not the case!

Worldwide the minerals and mining industry requires people with a wide range of skills from an equally wide range of disciplines.

Sure, if you want to work on a drill rig you can start straight out of school at 18. You need to be physically fit and have a good work ethic, and be able to adapt.

But there are also many jobs for people who have no interest in digging or drilling or driving. The industry needs accountants and planners, lawyers and lab technicians. We need people with degrees and people with trade training.

Another misconception is that the mining industry is only for blokes. Historically, the industry has been a male-dominated sector, but in more recent times companies, our systems, and our operations are ready to seamlessly absorb women into the workforce – opportunities for women in the industry have never been greater.

Most of all, we need adaptable people who are keen to learn and who respond well to a challenge. And of course we need people with a strong safety ethic.

OceanaGold Macraes is committed to establishing a diverse workforce with a preference for employing local.
